

Navigation

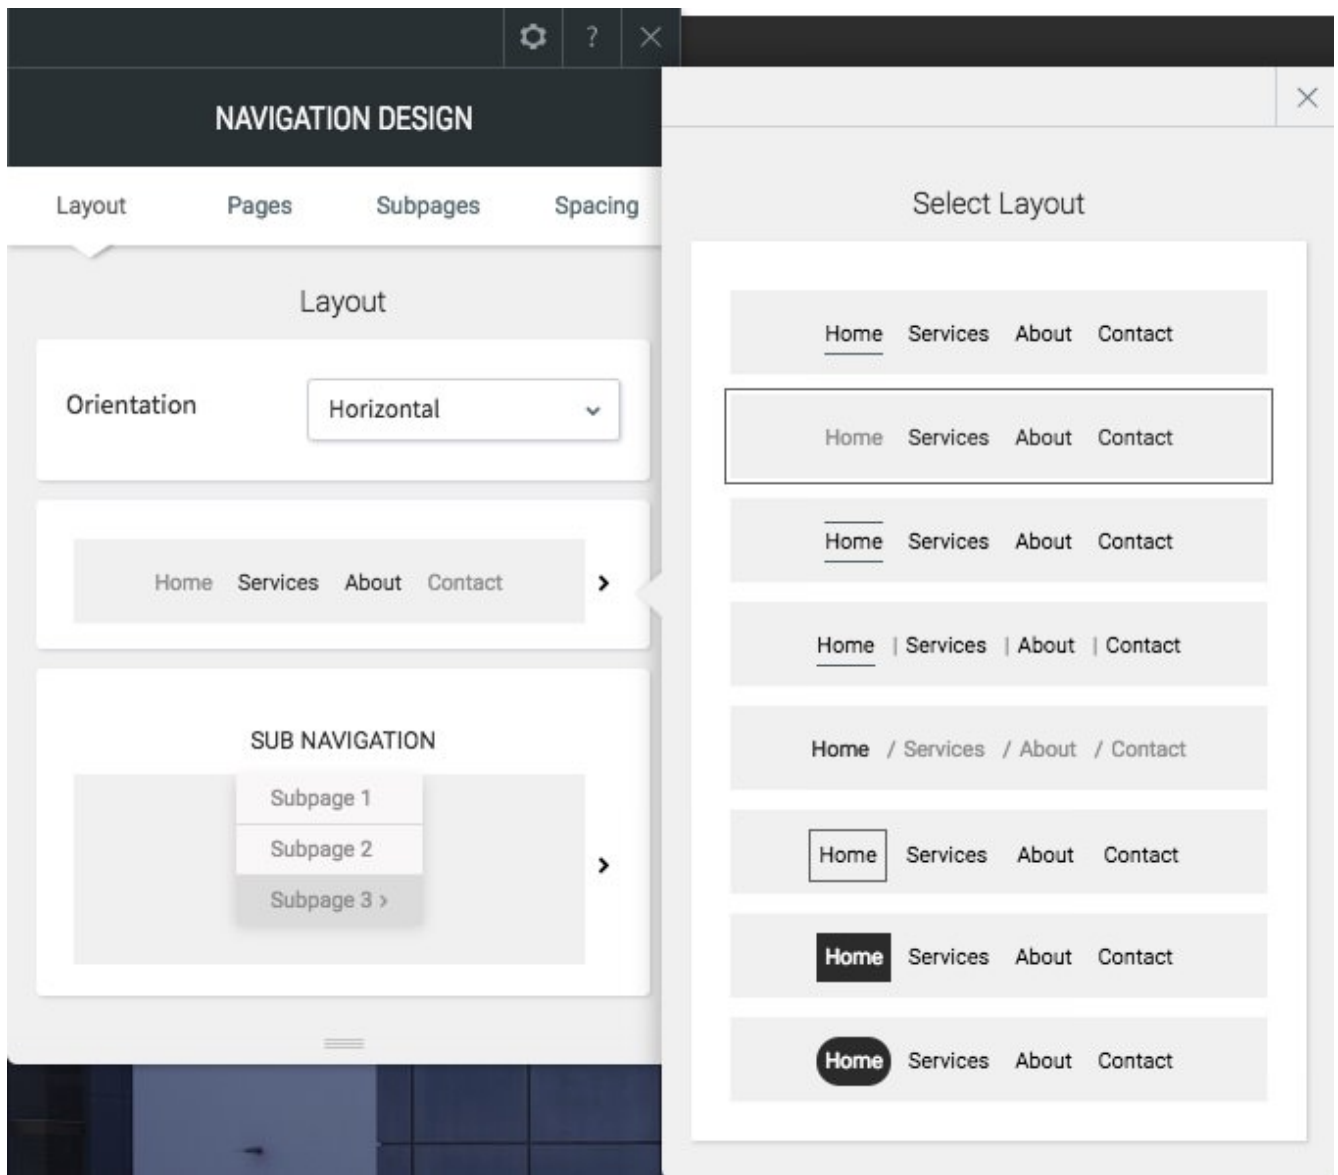

Navigation and subnavigation menus differ between templates and are created automatically based on your pages.

You can make edits to your menus by right-clicking on the navigation and selecting “Edit Design.”

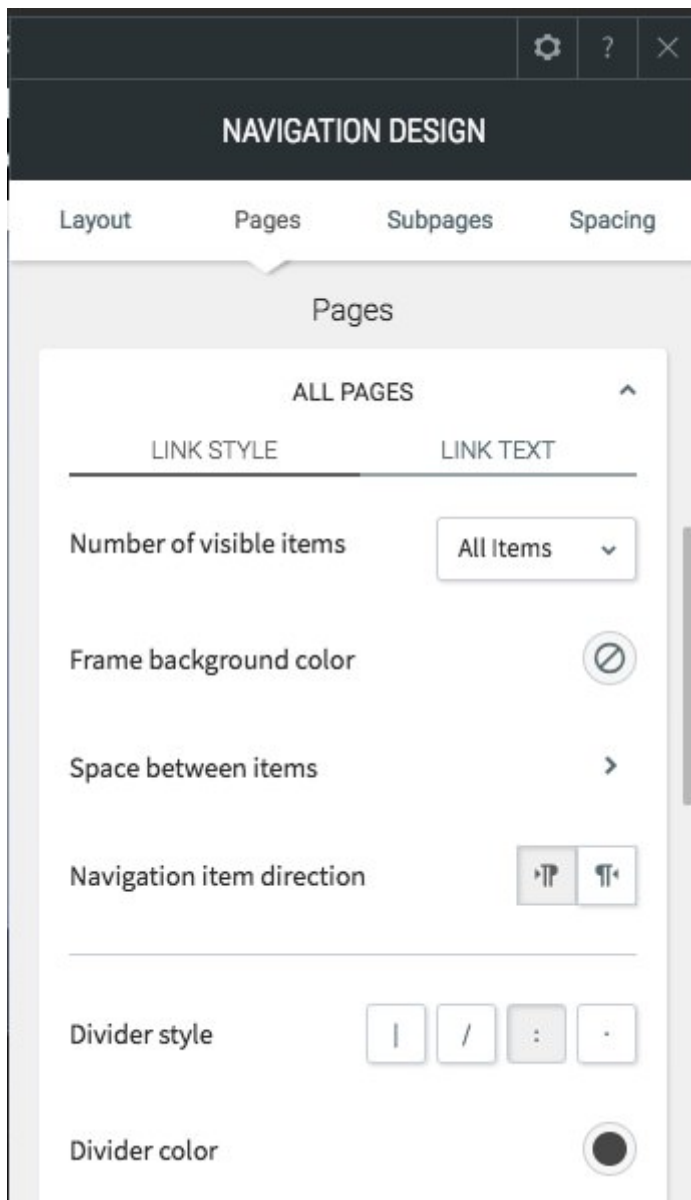

From the design section you can change the navigation layout and orientation. If your site includes subpages, you can change the layout here.

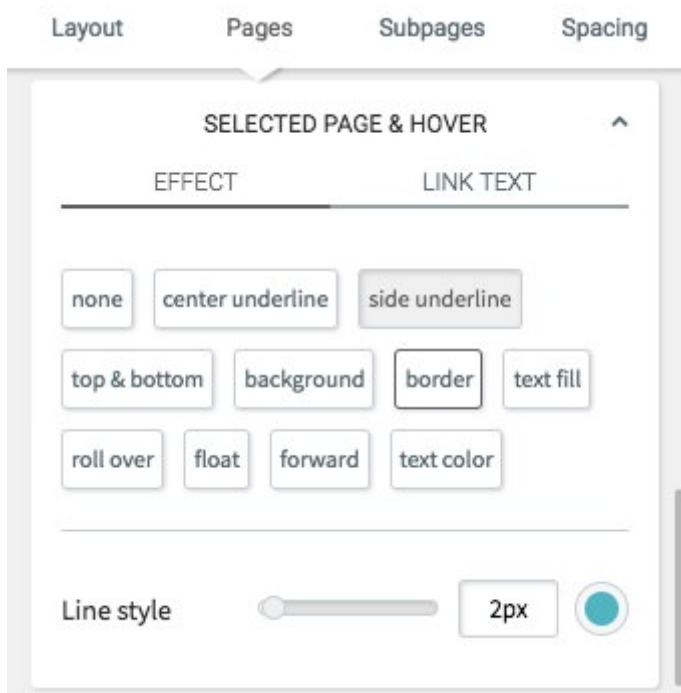

Note: switching the layout will reset any customization.

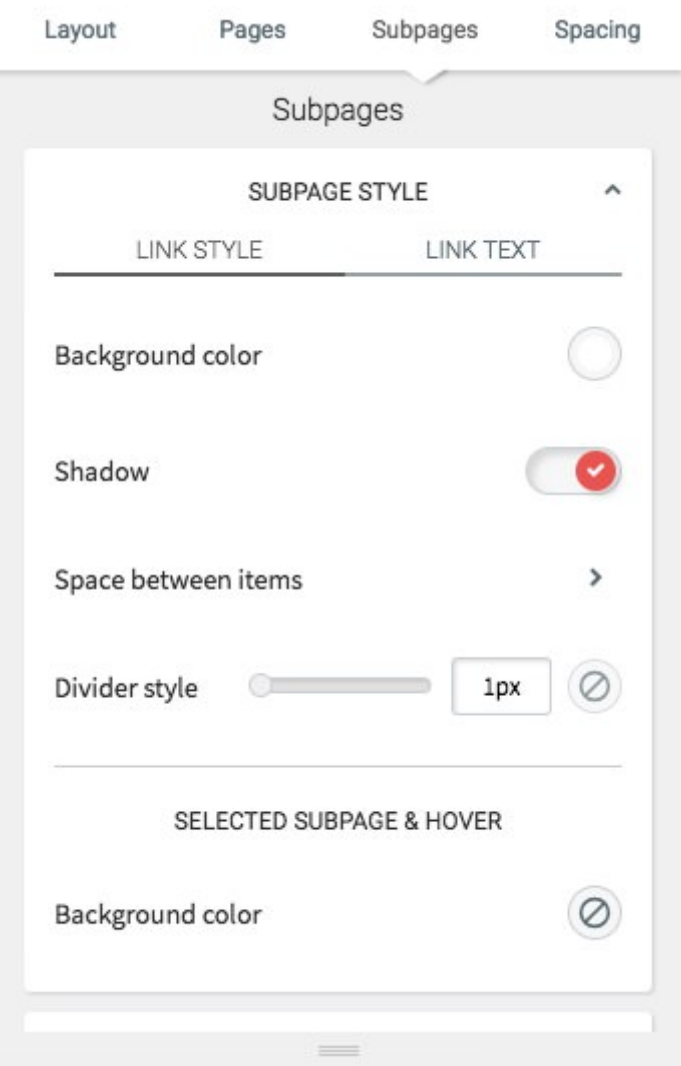

Select the Pages tab to customize the navigation bar (color, spacing, text), font, the direction of navigation, as well as the visibility, spacing and divider between items.

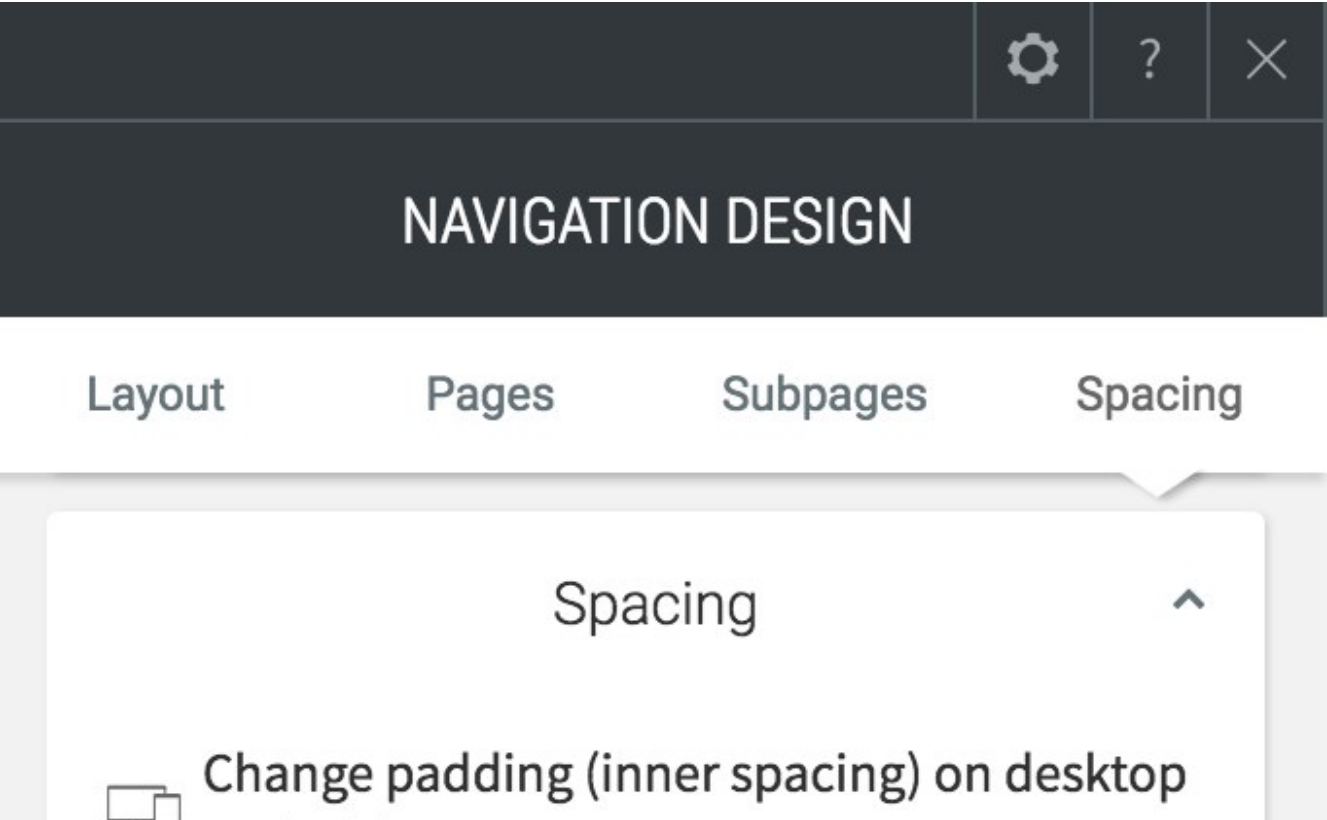

Scroll down to customize the hover effect for the navigation.

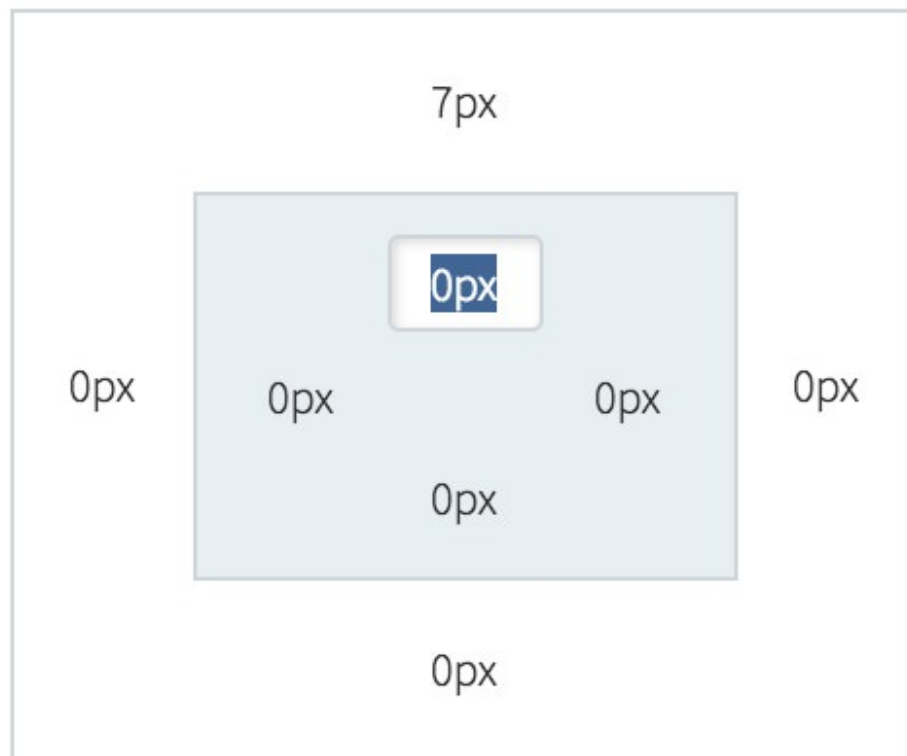

Select the “Subpages” tab to customize the subnavigation.

Finally, select the “Spacing” tab to adjust the spacing of your navigation.
